

Harnessing the Power of Evolution

— James Keal —

Adelaide Artificial Intelligence Club

Optimisation

What is it?

Optimisation

Making something the best it can be.

What kind of problems?

10 \$ 9 kg 1.11 \$/kg

7 \$ 12 kg 0.58 \$/kg

1 \$ 2 kg 0.5 \$/kg

3 \$ 7 kg 0.43 \$/kg

2 \$ 5 kg 0.4 \$/kg

(1) 10 \$ 9 kg → 

(2) 7 \$ 12 kg → 

(3) 1 \$ 2 kg → 

(4) 3 \$ 7 kg → 

(5) 2 \$ 5 kg → 

What kind of problems?

- Problems for which many possible solutions exist
- Problems for which solutions are easy to evaluate and compare...
- ... but solutions are difficult or impossible to check if optimal

What kind of problems?

Genetic Algorithms

- A solution search algorithm inspired by natural selection
- Part of a much larger field known as “evolutionary computation”
- Developed by John Holland, University of Michigan, 1970

Genetic Algorithms

1. Encode solutions as *genomes* (strings)
2. Define the *fitness* function
3. Randomly generate a *population of individuals*
4. *Repeat*:
 - a. *Select* individuals from the population based on fitness
 - b. *Mate* selected individuals to produce a new population
 - c. *Mutate* some individuals to introduce diversity

GAs

1. Encode solutions as genomes (strings)

$$X = [A, G, A, A, G, T, C, T]$$

2. Define the fitness function

$$f(X) = 5$$

Example: Colours

#DA563D

Example: Colours

#DA563D

1101 1010 0101 0110 0011 1101

Example: Colours

T = 0000 0000 1111 1111 0000 0000

X = 1101 1010 0101 0110 0011 1101

$$f(X) = \sum_i x_i \odot t_i$$

Example: Colours

T = 0000 0000 1111 1111 0000 0000
X = 1101 1010 0101 0110 0011 1101

$$f(X) = 10$$

GAs

4. Randomly generate a population of individuals

GAs

4. Repeat:

a. Select individuals from the population based on fitness

15	17	18	20
16	15	11	15
6	4	22	10

GAs

4. Repeat:

a. Select individuals from the population based on fitness

15	17	18	20
16	15	11	15
6	4	22	10

- Randomly choose n and keep the best, k times
- Shuffle and pair then keep the best of each, twice
- Spin a wheel with slice size proportional to fitness

GAs

4. Repeat:

a. Select individuals from the population based on fitness

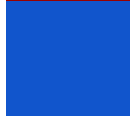

15	17	18	20
16	15	11	15
6	4	22	10

- Randomly choose 3 and keep the best, k times

20

GAs

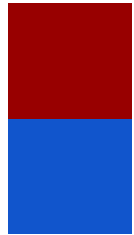

4. Repeat:
 - b. Mate selected individuals to produce a new population

	$X =$	1001	1000	0000	0000	0000	0000
	$Y =$	0001	0001	0101	0101	1100	1100

With some probability P_c

GAs

4. Repeat:
 - b. Mate selected individuals to produce a new population

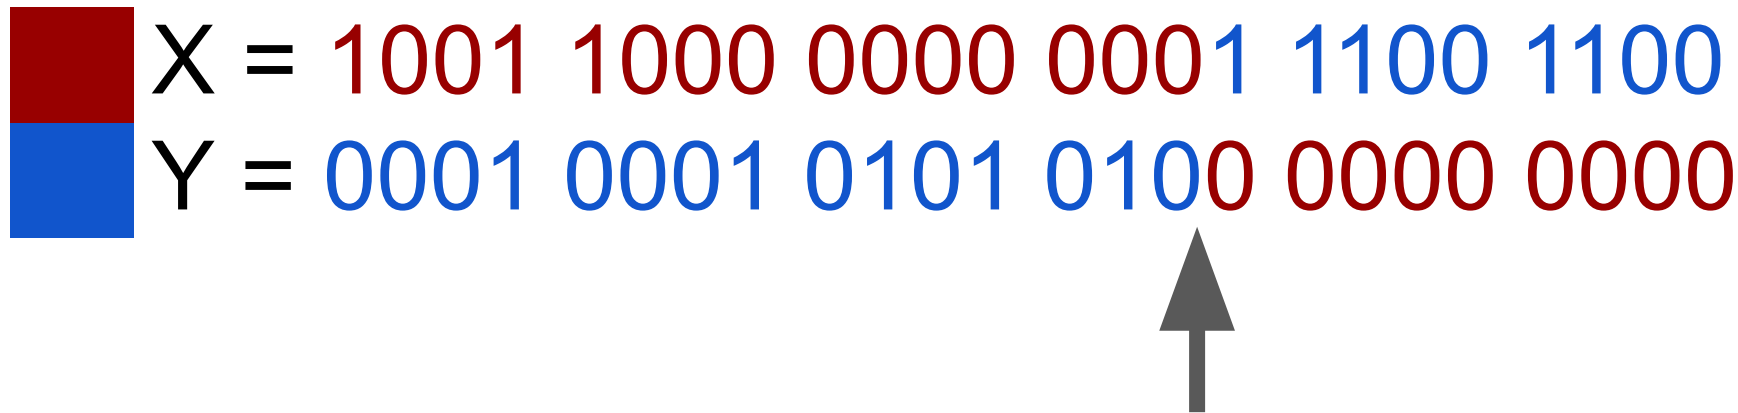

X = 1001 1000 0000 0000 0000 0000
Y = 0001 0001 0101 0101 1100 1100

GAs

4. Repeat:
 - b. Mate selected individuals to produce a new population

X = 1001 1000 0000 0001 1100 1100

Y = 0001 0001 0101 0100 0000 0000

GAs

4. Repeat:
 - b. Mate selected individuals to produce a new population

X = 1001 1000 0000 0001 1100 1100

Y = 0001 0001 0101 0100 0000 0000

GAs

4. Repeat:
 - c. Mutate some individuals to introduce diversity

 $X = 1001 \ 1000 \ 0000 \ 0001 \ 1100 \ 1100$

GAs

4. Repeat:
 - c. Mutate some individuals to introduce diversity

 $X = 1001 \ 1000 \ 0000 \ 0001 \ 1100 \ 1100$

GAs

4. Repeat:
 - c. Mutate some individuals to introduce diversity

 $X = 1001 \ 1000 \ 0000 \ 0001 \ 1100 \ 1100$

GAs

4. Repeat:
 - c. Mutate some individuals to introduce diversity

 $X = 1011 \ 1000 \ 0000 \ 0001 \ 1100 \ 1100$
